

Aegis Pipeline

Input
ERC-4337 account contracts

Validation context
(EntryPoint assumptions)

VOIR Construction

Semantic lifting of validation logic

- CFG/DFG normalization
- state update abstraction
- call and authority relation extraction

Output: VOIR graph and semantic facts

Semantic Checker Layer

Predicate-violation detection over VOIR

- Authorization Omission
- Nonce Validation Omission
- Incorrect Success Signaling
- Intent-Hash Mismatch
- Nonce Progression Failure
- Caller-Binding Failure

Output: violated predicates and witness constraints

Evidence Consolidation

Contract-level finding synthesis

- checker result aggregation
- path-to-source projection
- evidence packaging

Output: auditable findings
